## **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-15, drawn to an elastomeric glove capable of imparting an active agent to the user, classified in class 604, subclass 292.
  - II. Claims 16-24, drawn to an elastomeric article, classified in class 604, subclass 289.
  - III. Claims 25-41, drawn to a method of forming an elastomeric glove, classified in class 427, subclass 340.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that (1) they are not disclosed as capable of use together and (2) they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions (1) the glove and elastomeric article are not disclosed as capable of use together. (2) Also, they have different designs since the glove is formed in the shape of a hand, while the elastomeric article does not claim a shape.
- 3. Inventions III and (I and II) are related as process of making and product made.

  The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process

Page 2

Art Unit: 3761

(MPEP § 806.05(f)). In the instant case (2) the product could be formed with a different process, such as stamping and sealing the edges of parallel sheets of elastomeric material.

- 4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
- 5. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
- 6. Claims 1, 16 and 25 are generic to the following disclosed patentably distinct species:
  - A. Elastomeric material, specific polymer.
  - B. A hydrogel network of the coating.
  - C. An active agent of the coating.
- 7. The species are independent or distinct because each has limitations not required by the others. For example, forming a glove with silicone rubbers does not specifically necessitate including hydroxypropyl acrylates or a botanical agent. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. For each of the above genera, Applicant is required to elect

Art Unit: 3761

and name a specific compound. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the

record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Adam Marcetich whose telephone number is 571-272-2590. The examiner can normally be reached on 8:30am to 5:00pm Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tatyana Zalukaeva can be reached on 571-272-1115. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
